

## Overview

LESSON 1 – INTRODUCTION TO UIPATH – RECAP

# Overview

This lesson offers an overview of some of the tools you will use when automating – **UiPath Studio**, **UiPath Robot** and **UiPath Orchestrator**. You have been familiarized with the UI of these tools and the role and capabilities of the **Orchestrator**.

# Overview

Automating processes is easy using UiPath because:

-  UiPath has an embedded web scraping mechanism that understands the page structure and can automatically identify lists or tables inside a webpage.
-  Recorder functionality in UiPath is helpful to record the actions you want the robot to perform.
-  Create reusable component that can be shared by multiple projects.
-  There are over 400 activities in uipath studio already created for your convenience and periodically enhanced with more.
-  Orchestrator can be used for process and robots management.
